

Dr. Illia Krasnou is research scientist in Department of Materials and Environmental Technology

*at Tallinn University of Technology.*

Dr. Illia Krasnou is a specialist in hydrodynamics of non-linear functional polymers and composite polymer materials, and in polymer composite nanofibers electrospinning. The main fields of interests are flow behaviour of polymers in solution and melt, development of polymer with nanosize fillers composite materials. Also production of special purpose polymer composite nanofibers and study of nanofiber properties to morphology correlation.
